

## Reading Assignment:

## Question:

- If you create a constructor method to build a DVD by title then create a constructor method to build a DVD by category. Does JAVA allow you to do this?

## Answer:

- In Java, in order to overload constructors, each one needs a different signature. If you create two constructors that have the same number and type of parameters (in this case is String), Java will not be able to differentiate these two constructors and lead to an error.
